

## **Planned Sessions for 2004 SHINE Working Group II – Origin and Evolution of Slow Solar Wind**

Where does the slow wind come from and what are the physical mechanisms that drive it? How does it differ from the fast wind? In two half-day working group sessions held jointly with Working Group 1, we will focus on the complicated issue of the slow solar wind: its sources and evolution. We will cover a variety of theoretical/modeling perspectives on the slow wind, as well as taking a careful look at what the observations (both solar and interplanetary) are telling us about its origins and evolution.
